

Chief Proctor Application

The CP Mobile Application is a comprehensive tool designed to facilitate the efficient monitoring and management of exam centers. It serves as a centralized platform for the ground teams to update their activities to the head office (HO), there are primarily 2 types of ground users i.e. Team Leader and Team Member and both have their defined set of roles and rights. On the HO side there is an admin user who manages the HO Operations.

Ground team operates via Mobile App which is currently compatible with Android

HO team operates via Web based application

Key Features

- Master Management
- Selfie & Geo Location
- Report Upload
- Candidate Scan
- Feedback System
- Notification Center
- Infrastructure & Manpower Data Capture

Benefits

Efficiency

By providing a centralized platform for managing exam center activities, the application enhances efficiency in coordinating tasks and capturing essential data.

Flexibility

Users can access the application from their mobile devices, allowing for flexibility in performing tasks and managing exam center activities from anywhere.

Accuracy

With features like barcode scanning and detailed data entry fields, the application helps ensure accurate documentation of candidate details and exam center information.

Security

Features like capturing security details and managing access rights help in maintaining the security measures at exam centers, ensuring a safe and controlled environment for the examinations.

Transparency

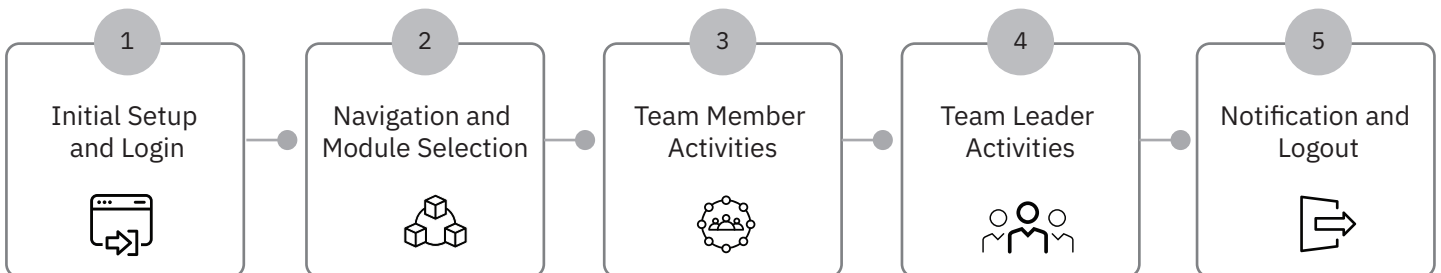

The application promotes transparency by enabling users to upload reports and provide feedback directly, facilitating clear communication and accountability.

Reduced TAT

With the help of the CP App, data collected on ground in form of physical reports can be shared with HO team on the same day of exam.

Process Flow

Long Term Focus

1. CP App to be made compatible with IOS devices.
2. New data /report capture to be included in the CP App like Debarred Declaration Form and Venue Attendance etc.
3. Making app compatible for offline data capture and later push to central server when online.
4. Advance user management at HO level for roles and right distribution and project wise allocation.
5. Web Application dashboards to be region specific so that regional heads can monitor and manage their respective regions.
